

## **Change to Login Page for Parents**

On Sunday, July 10, at 10:00 AM PDT, RenWeb released new security procedures, along with a new company website that includes new ParentsWeb login portals. The new security procedures will provide user authentication using a user name and password system. With that change, Parents will be prompted for a District Code, User Name and Password when logging into the ParentsWeb.

### **User Name**

To make the transition smoother we have initialized all user names based on a person's email address in RenWeb. People who share a common email address will be given a unique user name by appending a number to the end of the email address. For example, if two parents share the email [parents@gmail.com](mailto:parents@gmail.com), then one will keep the original email for their user name and then the other will have [parents@gmail.com-2](mailto:parents@gmail.com-2). This ensures that every person in the system will have a unique user name. All users will be allowed to modify their username: the only restriction is that the user name must be unique from all other users in the system. Users who attempt to create a user name that is already in use will be instructed to change it.

### **Password**

The user's password within the system has not changed except for faculty who are also parents. In the case of faculty who are also parents, they will keep the password used to log into RenWeb (Desktop and FacultyWeb access) and will use that same password to access ParentsWeb.

With this security upgrade, RenWeb will no longer store passwords in a viewable form in the database. Parents who forget their password can request to receive an email that will allow them to modify their password. There will be no ability for either the school or RenWeb support to view a parent's password. Parents will not be required to change their password, but they will be a part of the password length requirements.

All current links will remain active until September 1. Until that time the user will be prompted with a message that the page has moved.
